"Gasoline prices in the U.S. have edged slightly lower over the past week, even as geopolitical tensions intensify, with the Trump

administration promising tariffs that could not only create economic uncertainty but also impact what some motorists pay at the pump in the weeks ahead," said Patrick De Haan, head of petroleum analysis at GasBuddy. "Given the volatility surrounding the tariff situation, forecasting fuel prices remains challenging, as uncertainty lingers over the timing and scope of these tariffs, which the Trump administration has suggested will soon take effect. This comes on top of ongoing concerns about the Russian invasion of Ukraine and discussions of a potential deal to end the war. While OPEC has signaled its intent to stabilize the market, policy decisions from the White House could introduce further uncertainty, making it difficult to predict where prices will head next. However, nearly every year sees a seasonal spring increase, which could eventually push prices higher ahead of summer."
